

## Limiting location display to locations in a base

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 17.01
- 

### Description:

We can limit a search to particular locations by specifying a base which includes only those locations, but the holdings which display include \*all\* locations. Is there some way that we can limit the locations which display to locations which are actually in the base?

### Resolution:

You can do this by including only the locations you want to display in the `./xxx01/tab/tab_item_list_order.<base>` for this base.

Prior to v17.02 rep\_change 448, `tab_item_list_order` was used for the ITMH field but not the PST/LOC fields.

With rep\_change 000448, it also works for the PST/LOC.

To activate this, the following line must be added to `tab_sub_lib_sort`:

```
WWW-FULL-LOC-PST 02
```

---

## Additional Information

faq, base search. location
