Question

1) Is the order of lines in xxx01/tab/tab11_word important? Is there a difference in the following 2 settings?

A

5#### -56 03 WRD

505## r 03 WAU

B

505## r 03 WAU

5#### -56 03 WRD

2) Is there a difference in the settings regarding the indexing of specific subfields:

A

084## a 01 WRD WBB

084## 2 01 WRD WBB

B

084## a2 01 WRD WBB

Answer

The order of the lines doesn't matter as in any case all lines from tab11_word are considered for indexing purposes. This is different from some other configuration tables where a field is handled only once at the 1st. occurrence (e.g. xxx01/tab/edit_field.lng).

The same for example2: there is no difference in this settings, you can use single lines for every subfield or one line for all required subfields.
