-

Desired Outcome Goal:

How to create a new schema in ARC server

Procedure:

1. Ask for a new license to License Manager (join the old license to the request + the new users and schema)
2. After getting it, save the old license at \$aleph_proc/ldap and replace it, then run the script "csh -f newlicense.csh"
3. Edit the file \$arce_root/arc_start.private and add or replace libraries (schemas) in the ARC_LIBS directory.
4. To initialize the new schema from the command line:

```
setenv ARC_LIBS <new schema name/s>
```

Like:

```
setenv ARC_LIBS XXXR0 (for one scheme)
```

or

```
setenv ARC_LIBS "$ARC_LIBS XXXR0 XXXR1" (For more than one schema)
```

```
ap
```

```
csh -f imp_arc_libs
```
