

ORA-00903: invalid table name

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

What does the "ORA-00903: invalid table name" message mean? We find that it is occurring in the case where the table *does* exist.

Resolution:

This message means that Oracle has gone to look for this table in a particular library and did not find it.

This can be due to a table which is actually missing or, more often, to an LKR field containing an incorrect library, which, for instance, causes the program to look for a bib library table in a library which is not a bib library.

Additional Information

Oracle, invalid, table name, faq
