## Creating new skins in WebVoyage

- **Product:** Voyager
- 

### Question

How to create a new skin directory in WebVoyage?

### Answer

#### via command line (where xxxdb is the Voyager Database Instance)

1. Connect to server as voyager user via SSH or telnet
2. 

```
cd /m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui
```
3. 

```
cp -pr exl_default new_skin
```

Result: this will create a copy of exl\_default named new\_skin. You can also copy other skins, just change the cp command as appropriate.

#### via UTIL menu (8.1.0 and higher)

1. Connect to server as voyager user via SSH or telnet
2. 

```
dlib xxxdb
```
3. 

```
util
```
4. Follow the prompts:
  1. 

```
W. WebVoyage Utilities
```
  2. 

```
C. Create New Skin
```
  3. Follow prompts to create new skin.

Result: a new skin directory with the name you provide at the prompt will be created for your xxxdb. It is a duplicate of the exl\_default skin.
