## Create URL for Different Language Interfaces

- **Product:** Primo
- 

### Desired Outcome Goal

Create a URL that will direct users into Primo using a language interface different than the default language for the view.

### Procedure

Currently there isn't a formal short template to create this URL.

### Workaround

```
http://<server name:port>/primo_library/libweb/action/preferences.do?fn=change_lang&vid=<view code>&prefLang=<language code>&prefBackUrl=<url back to home page>
```

For example

```
http://primo.exlibris.co.il:1701/primo_library/libweb/action/preferences.do?fn=change_lang&vid=PRM&prefLang=en_US&prefBackUrl=http://primo.exlibris.co.il:1701/primo_library/libweb/action/search.do?vid=PRM
```
