## p\_manage\_16: when would it be used?

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

We are rebuilding our ACC Headings. Do we need to run p\_manage\_16 ("Alphabetize Headings - Setup") as part of this process?

### Resolution:

This Setup service alphabetizes the headings according to the rules for alphabetization that are kept in the tab00.Ing table and the tab\_filing table.

p\_manage\_02 also does this and, if you are running p\_manage\_02, you do *\*not\** need to and should not run p\_manage\_16.

p\_manage\_16 might, theoretically, be a *\*substitute\** for running p\_manage\_02 in certain cases, but it takes almost as long as p\_manage\_02 and seems to be of little practical use.

See section 2.3 ("p\_manage\_02 and Associated Jobs") of the "How To Run Index Jobs" for a list of the jobs needed for rebuilding the headings.
