
p_ret_01 in abc60: "failed to read" ABC01.000000000

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
-

Description:

In several runs of p_ret_01 in abc60 I see this error in the logs. Is it a concern? Should something be fixed?

```
584585 READING DOC 000584584 AT 10:42:23
Error (expand_doc_hol_bib) : failed to read ABC01.000000000
585586 READING DOC 000585585 AT 10:42:29
```

Resolution:

You have specified expand_doc_hol_bib in the abc60 tab_expand. This message indicates that there is an abc60 record between 584584 and 585585 which looks like this:

```
LKR L $$aHOL$$b0000000000$$1ABC01
```

Since there is (and can be) no abc01 record with the key of 000000000, this is a mistake.

You can just ignore it (since it's just one record), or you could run p_ret_01 in abc60 to locate the record with this particular LKR field. If the record is not deleted, you could try to find the bib record it is *supposed* to be connected to.
