
p_ret_adm_01: what field does ITEM YEAR refer to?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

Question for the Circulation Module and running the Ret-adm-01 service under the GUI Circ Services\Items\General Retrieval Form (ret-adm-01):

Can you explain what the Year Filtering (Item Year) is going after when pulling by that criteria?

Resolution:

We see the following in ./butil/b_ret_adm_01_filter.cbl:

```
WHEN "YEAR"
```

```
...
```

```
IF P-FILTER (J) NOT = SPACES AND  
Z30-CHRONOLOGICAL-I = P-FILTER (J) (1: 5)
```

Thus, the "YEAR" filter is looking at the Z30-CHRONOLOGICAL-I field. As such, it applies only to items (primarily ISSUE items) which have the Z30-CHRONOLOGICAL-I field populated.
