

Batch services in v18 - Print to ADM Lib

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

When submitting services in v18.01, we get error message:
"13 File not found"

Why?

Resolution:

This happens in v18.01, when "Print to ADM Lib" checkbox is checked.
If this case, job's input and output files are located in ADM library's scratch directory.
The file is not found in the ADM/scratch, the error is displayed and the job terminates.
If you do not want to use the "Print to ADM Lib" option, please uncheck this option.
Please note that, once checked, the "Print to ADM Lib" option remains active for all the other services.
