

## Control Language and Staff Privileges for Order Units

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

We have begun to enter our budget allocations in Aleph. I had to change staff privileges for budgets.

When I click on Staff Privileges (bottom right Key icon) > select staff user > click Order Units button > Choose Administrative Library, I get an error message (Communication error global-11 : Library's host not defined in library.ini). This works on Test, but not Production.

### Resolution:

The following variable needed to be updated in alephe/aleph\_start:

```
setenv control_lng FRE
```

The reason it worked on Test and not Production was because the tab\_sub\_library.eng on Test had some XXX50 content so there was content to display.

On Production, there was no tab\_sub\_library.eng content and it was trying to read that table instead of the tab\_sub\_library.fre table which did have content.

Although this works without the following setting it's good to remember that the following setting should be configured in \*all\* prof\_library files:

```
set_symbol CON_START FRE (or whatever the language)
```
