
util Database Verification Utility

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

It seems that util o/12 is a Database Verification Utility, that is a validation/maintenance routine for the Oracle database. Does Aleph need to be down?

Resolution:

\$aleph_proc/util_o_12_01 has the following:

```
# echo "The Verification tool performs check on an offline database."  
# echo "Please close the database and run the tool again."
```
