

## How is "DEFAULT\_TS" used?

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Question

How is the "setenv DEFAULT\_TS" value in \$alephe\_root/aleph\_start used?

---

### Answer

DEFAULT\_TS is used in the case where no tablespace is specified in col. 5 of a \$data\_root/file\_list entry. The normal thing is to specify a tablespace value in \*every\* \$data\_root/file\_list entry.
