## ADAM scan jobs: What is the number in field SCJ\$\$h?

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 21
- 

### Question

When creating an ADAM scan job in the GUI field SCJ is created which holds the according information. Subfield \$\$h has a number followed by the barcode Where does the number come from?

---

### Answer

According to document "How to use the ADAM scan interface" the normal behavior is that in SCJ\$\$h the barcode is added introduced by the 001 number of the BIB record. If you need the "pure" barcode, e.g. for the scanning department, refer to subfield \$\$h where it's added without any additions.
