

How to change skins on the fly

- **Product:** Voyager
-

Question

When we want to look at a different skin than the default or switch back and forth, how do we do that?

Answer

1. Open WebVoyage in browser.
 2. Add `?sk=new_skin` to end of URL (where `new_skin` is the name of the skin): e.g., `http://hostname:7008/vwebv/searchBasic?sk=new_skin`
 3. If URL of page already contains question mark, add `&sk=new_skin`: e.g., `http://hostname:7008/vwebv/search?se...=1&sk=new_skin`
