

How to replace the en_US skin with a sandbox skin

- **Product:** Voyager
 - **Product Version:** 8.0.0
-

Question

How to replace the WebVoyage en_US skin with a customized sandbox skin?

Answer

1. As the Voyager user, navigate to `/m1/voyager/xxxdb/tomcat/vwebv/context/vwebv/ui`
 2. Rename the existing en_US folder to en_US_backup_20140821 (`mv en_US en_US_backup_20140821`)
 3. Rename your sandbox folder to en_US (`mv sandbox en_US`)
 4. Set the correct owner & group to the new en_US directory (`chown -R voyager:exlibris en_US`)
 5. Set the correct permissions to the new en_US directory (`chmod -R 755 en_US`)
 6. Restart Tomcat using the `"/m1/voyager/xxxdb/tomcat/tsvrcctl restart"` command
