Question

Is there a way to create a list of order numbers sent by EDI?

Answer

Actually it's not possible to create a list of order numbers sent by EDI. The only way to check which EDI orders were sent is to grep for the order numbers on the server in directory xxx50/edi/out/xml_processed directly after "Send Outgoing EDI messages (edi-11)" ran:

```
aleph@nnn(a22_1) XXX50> grep '<z68-order-number>' *
<z68-order-number>140136127</z68-order-number>
<z68-order-number>140136129</z68-order-number>
<z68-order-number>140136132</z68-order-number>
<z68-order-number>140136134</z68-order-number>
<z68-order-number>140136135</z68-order-number>
<z68-order-number>140136136</z68-order-number>
<z68-order-number>140136140</z68-order-number>
<z68-order-number>140136141</z68-order-number>
<z68-order-number>140136147</z68-order-number>
<z68-order-number>140136148</z68-order-number>
<z68-order-number>140136150</z68-order-number>
<z68-order-number>140136151</z68-order-number>
<z68-order-number>140136152</z68-order-number>
<z68-order-number>140136153</z68-order-number>
<z68-order-number>140136154</z68-order-number>
<z68-order-number>140136155</z68-order-number>
<z68-order-number>140136157</z68-order-number>
<z68-order-number>140136159</z68-order-number>
<z68-order-number>140136161</z68-order-number>
<z68-order-number>140136162</z68-order-number>
```
