## How can PDA license information be displayed in Primo?

- **Article Type:** Q&A
  - **Product:** Alma
- 

---

### Question

How can PDA license information be displayed in Primo?

---

### Answer

Because Alma PDA portfolios are created as standalone portfolios, the license information must be on the portfolio level instead of the package level

This can be done in bulk by creating a set of portfolios in the PDA program  
Running the Update Portfolio job found under Alma > Administration > Process Management > Run a Job  
And update the license information

Once this is done, PDA license information will display in Primo.
