

SDI email subject line blank

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

The subject line is blank on the email generated by SDI.

Resolution:

The SDI process does not use form_description.eng. The default email subject heading is from the z325 table:

```
02 z325_email_subject
```

If the user leaves the email subject blank in the SDI request form, then ALEPH returns an error message (not a default from form_description).

The message is in ./aleph/error_eng/p_sdi_01:

```
5001 0001 L SDI REQUEST MAILxxxx
```

You can change the message to whatever text you want. (You should change the error message in the u-tree, rather than the a-tree, which is subject to being updated by a Service Pack.)
