## New search fields in Advanced Search after migration v.18-v.22

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 19
- 

### Question

After implementing the changes in the file "find-d" section (See document "Upgrade Express 18-19 User Guide", p 70 ff.) there is no new field appearing in the Advanced Search. Are there other changes to do??

---

### Answer

There were only two new fields added to find-d in order to have the possibility to search for more fields (and combine the search) than before. To be more clear: only the number of possible fields to search was enhanced but not any field itself. When modifying find-d accordingly you won't see a visible change. However you can now enhance find-code-include and add more fields. If you don't need it you have to do nothing.
