Question

Does Rosetta execute fixity checks when a file is delivered ?

Answer

Delivery is not an area which is used to perform this kind of checks, it's purely about viewing/getting objects. According to best practices and in fact this is how all Rosetta customers are doing it - fixity checks should be done periodically against the permanent module.

Additional Information

You can develop a plugin viewer that will run fixity before delivery, however, this workflow is not in Rosetta road map.
