Description:

The limit for the number of hits displayed in the Web OPAC is said to be set in `www_server.conf` by the line `"setenv set_result_set_limit"` which defaults to 1000.

In v16, there is no `"set_result_set_limit"`, but there is a `"setenv www_no_items_display"` which I had set to 4000.

It is still displaying only 1000. Is there more to changing the number of records displayed in the web OPAC in v16?

Resolution:

In v16.02 the `set_result_set_limit` with a range of 1000 - 20000.

You can have a different limit for the GUI vs. the Web, if you like, by having a `"setenv set_result_set_limit"` with one value in `www_server.conf` and a `"setenv set_result_set_limit"` with a different value in `pc_server_defaults`.

Though it is not noted, the `sort-limit` is the same as the `result-set-limit`, that is, any brief list you retrieve will be sorted according to the default sort and can be resorted per the sort options.

The `"setenv www_no_items_display"` relates to the number of items included in the Holdings display, not to the Search result set.

Additional Information

16.02, limit, hits, Web OPAC
