Description:

Which table is used by file-96 to create a holdings record ?

Resolution:

In order for the 852 to be created in the HOL record by "Generic Vendor Loader (file-96), the BIB record must have fields 050/090, and tab100 of the HOL library must have CREATE-852-HOL=Y.

If there is no 050/090 in BIB, the 852 in HOL is not created at all.

When there is 050/090, the 852 is created with \$\$b and \$\$c from the tab_96_def Z30 definitions, and \$\$h and \$\$i from 050/090 \$\$a and \$\$b of the BIB record. No additional setting other than mentioned in step 1 is needed.

The tab_mapping is not used by p-file-96.

The service Advanced Generic vendor loader (file-90), is using xxx50/tab/tab_mapping for HOL tags creation.

Regarding the Create Holdings and Item Records Using Bibliographic Data (manage-50) and Enhanced (manage-500) - these services are using the mapping tables that allow configuration of any data from the BIB to be mapped to the HOL 852.

Note that manage-50 creates the HOL record in the database, while manage-500 creates a file with HOL record, which has to be loaded to the database.
