
Running an "undelete" process for ebook records

- **Article Type:** General
 - **Product:** Alma
-

Desired Outcome Goal:

Create an import profile that will delete records through a vendor provided file

Procedure:

1. Go to Alma > Resource Management > Resource Management Configuration Menu > Import Profiles
2. Create New Import Profile
3. Choose Type of Repository

On the profile details section choose:

1. Originating System: Other
2. Physical Source Format: MARC21 Binary
3. Load File Source: Upload File(s)
4. Active: True

On normalization and validation page, choose to check using MarcXML Bib Import

On the match profile page, choose:

1. 035 Match Method for both serial and non-serial
2. Merge
3. Automatic handling
3. Merge method: Overlay all fields but local
4. Upon no match do not import

Additional Information

Once the import profile is complete, the file can be uploaded. It will place a "d" in the LDR in the sixth position, which signals to Alma to delete the record
