
New functionality "Item changes alert" - How does it work?

- **Article Type:** Q&A
 - **Product:** Aleph
 - **Product Version:** 22
-

Question

How does the new functionality "Item changes alert" work? Although it's setup it seems to fail.

Answer

A message will be displayed if a (staff) user updates an item and then moves to another item without saving the changes. This is only valid for item lists where more than one item is displayed. See attached example.

Additional Information

Information for setup of this functionalita can be found in "Aleph 22 Syslib Guide - Items", chapter "20 Item changes alert".
