
p_manage_62: "file /exlibris/aleph/aabc/u17_2/alephe/scratch does not exist"

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

After creating the RefABCchange file using p_ret_adm_01, I am trying to submit p_manage_62, specifying "RefABCchange" as the input file.

But the following message pops up, pointing to the Input file box on the submission screen:

```
file/exlibris/aleph/aabc/u17_2/alephe/scratc does not exist
```

Resolution:

Changing the name to all lowercase ("refabcchange") corrected this problem.

Though there may be some cases where this is not a problem, as a general rule, you should *not* use uppercase letters in file names: use lowercase letters only.

(Only the first 40 characters of the file name appear in the error message produced in the Services submission screen, so the full name does not appear.)
