Question

How to use command line searching in Tomcat WebVoyage?

Answer

1. To use command searching in WebVoyage you must have first enabled either the Command Search(CMD) or Command Search with Relevance(CMD*) search types. See [How to enable command searching in WebVoyage](#)
2. Select Command Search type from the Basic Search page.
3. Use the general format of [Search Code] [Search Term] - example: (TKEY Agriculture)
4. Link searches with boolean operators (AND, OR, NOT) - (TKEY "Animal Farm" AND NKEY Orwell)
5. Use parentheses to group searches and link with boolean operators - (TKEY patent OR copyright OR "intellectual property" AND (SKEY "intellectual property" AND JKEY "law review"))

The full list of available search codes can be found in System Administration > Search. The most common search codes:

Author name keyword	NKEY
Title keyword	TKEY
Subject heading keyword	SKEY
Date of publication	260C
Journal title keyword	JKEY
Place (city) of publication	260A
Publisher name keyword	260B
Series title keyword	SERI
ISBN	ISBN
ISSN	ISSN

Additional Information

See: [Command Keyword searches fail when combined with 008P, 008L](#)
