Question

What's the difference between ACQ services "Load EDI Incoming Messages (edi-10)" and "Load Invoice and Line Items (acq-32)" ? Both load invoices to the system.

Answer

The "Load EDI Incoming Messages (edi-10)" service is for loading EDI messages in the specific EDI format. With "Load Invoice and Line Items (acq-32)" you can load invoices which are added to a file in XML format. For EDI you can only use the services you'll find under "EDI" in the ACQ services menu.
