
Display of field/subfield in heading index

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 20

Desired Outcome Goal:

How to adjust the display of fields/subfields in the heading list in GUI?

Procedure:

Add the relevant index name with subfields and if required prefixes and/or suffixes in xxx01/tab/edit_field.lng.

Take note that the following codes (column 4) have to be used:

"H" is used for ACC (headings) display in the WEB OPAC

"C" is used for ACC (headings) display in GUI clients

Example for the display of heading index TIT:

```
1 # TIT## #
```

```
2 a A ^
```

```
2 g A ^< >
```

```
2 | A ^< >
```
