Question

Can a report be generated that contains the title, ISSN, and target URL for the object portfolios active in SFX?

Answer

*Using the Basic Export tool, select the option "Export URLs from active targets/target_services (and active object_portfolios they may contain)."

*The only complete URLs included in this export are those present in either the target service or object portfolio parse param fields

*Other target URLs are generated on the fly by the target parsers and are not stored in the KB (thus cannot be exported)
