
Determining Number of Patrons Added to Database Since a Certain Date

- **Article Type:** General
 - **Product:** Aleph
-

Description:

Is there an SQL command we can use to determine how many new patrons of each patron type have been added to our database since a certain date or between certain dates?

We would like to know how many new patrons of each patron type we have registered since opening our new facility last September.

Resolution:

The following SQL can be used to get you this count:

```
> s+ abc50
```

```
SQL> select z305_bor_status, count(*) from z305 where z305_open_date >= '20080901' group by z305_bor_status;
```

Additional Information

sql
