
Sampling rate configuration

- **Article Type:** Q&A
 - **Product:** Rosetta
 - **Product version:** 5
-

Question

There are two different spots within a workflow configuration where a sampling rate can be defined:

1. Material Flow
2. Producer Profile

Please explain the precedence of sampling rate configuration.

Answer

Sampling rate is first taken from the material flow, if it is empty, it will be taken from the producer profile.

Additional Information

The sampling rate will be activated **only** if SIP Routing rule is configured to **Approver** (under Approval)
