## Change how long files are saved on the server (ELIB Scandinavia)

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 21
- 

Desired Outcome Goal:

Change how long files are saved in the scratch directories of the libraries and libris.data

Procedure:

There is a job called \$aleph\_proc/elib\_opryd that will clean up more or less every directory related to elib\_jobs (among them libris.data)

Each area that is cleaned has its own environment variable to control how many days to spare.

This can be set in configuration file \$alephe\_dev/local/elib\_opryd.conf

Like:

```
setenv savetime_libris 60
```

If the script runs un-changed it will take away every scratch files that is older than 30 days

More details about the possible variables can be found in the header of script \$aleph\_proc/elib\_opryd (in Danish language)

```
# elib_opryd <local>
#
# Hvis local er angivet ryddes kun op i $ALEPH_LIBS
#
# Rydder op i aleph kataloger
#
# savetime kan sættes i aleph_start.private
# Er den ikke sat bliver default 30 dage
#
# Der kan også sættes mere specifikke savetimes i
# $alephe_dev/local/elib_opryd.conf
#
# savetime_libris 3 Libris filer
# savetime_burk 3 Burk filer
# savetime_log 3 Filer i log
# savetime_fsymbol 3 fsymbol filer (bruges af ALEPH)
# savetime_tmp 3 Filer i tmp (gælder også fsymbol filer)
# savetime_int 3 Filer der bruges af elib_30 (genudskriv)
# savetime_kvit 7 Filer i postkvit
# savetime_scratch 14 Filer i scratch kataloger
# loglines 500 Antal linier i logfiler
#
```

As soon as the script is modified and the configuration table completed, activate it via \$alephe\_tab/job\_list.

Example:

```
!!-!!!!!!!!-!-!!!!!!!!!!!!!!!!!!!!!!!!-!!!!-!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!-!!!!!!
```

```
W1 05:30:00 N elib_opryd.log /exlibris/aleph/a21_1/aleph/proc/elib_opryd
```

---

## Additional Information

This script is only included in the Aleph version, when region 'ELIB' (Scandinavia) is activated.
