

Acquisitions and Cataloging font too small

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

Aleph Acquisitions and Cataloging modules has the smallest print or font that I have ever seen in our Library systems. Is there a way to change this?

Resolution:

[From Linda Seguin, University of Maryland Libraries, via Global Aleph Users list:]

You should be able to adjust the font in the Aleph Administration (ALEPHADM) module. Look in the lower right corner of your GUI window for a blue icon that looks like a grid.

From the menu, select Configuration > Font Configuration.

Column 8, "Height to use," should allow you to change the font size to something bigger.

(Several people here noticed that their Aleph fonts looked considerably smaller after they had Windows 7 installed.)
