Description:

When attempting to use the ADD button on the check in node the description area is greyed out and can not be filled in or edited in anyway. It can be edited from the item list node.

Resolution:

It looks as if there is another place where you can edit Description. It shows up, but is grayed out on the "Arrival Form" tab (near the top). I think this is what you are referring to. But the Description field also is present on the Serial Levels tab, and it is editable on that tab.

Sorry, but I can't find any way to make that field editable on the first tab. It looks like perhaps the designer was thinking about items that had already been predicted and didn't expect that that field would need to be edited in most cases.
