

## error\_eng variable in aleph\_start

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

In our version 18 aleph\_start, we have:

```
setenv aleph_error_eng $alephe_dev/aleph/error_eng
```

However, \$alephe\_dev/aleph/error\_eng doesn't exist. It should either be \$aleph\_dev/aleph/error\_eng or \$alephe\_dev/alephe/error\_eng.

Can you tell me which it should be?

### Resolution:

It should be \$aleph\_dev/aleph/error\_eng .

Corrected in v. 19:

```
rep_ver #014140
```
