## Problem with Export for OCLC using XPR

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

---

### Description:

I'm working on resuming our export of holdings data to OCLC (and then RLIN) which we have not done since we started using Aleph. I have set up and generated the XPR index according to the "How to Export HOL Records Using p\_export\_02" document. However, when I run p\_export\_02 it does not select any records for processing, regardless of what date-range I use.

### Resolution:

The XPR fields were populated with the subfields reversed (date in \$a and utility in \$b). This has been corrected and p\_export\_02 is now able to correctly select records using the XPR index.
