Description:

We have a new library (XXX20) for ILL. How do I add this to the the Access Rights tree in Staff Privileges?

Resolution:

You need to add the new library to PAS line in table `./alephe/tab/library_relation`. This is from heading of `./alephe/tab/library_relation`:

PAS - This relation sets the list of libraries that appears in the Access Rights window when creating privileges for an operator. Each ADM library defines the libraries its users can modify. Only the libraries in the relation will be shown in the permissions list (GUI and WEB)..

For example..

PAS USM50 USM01 USM10 USM60.

If you have connected to the GUI with an operator whos Z66-USER-LIBRARY is USM50, this is the list of libraries that will be displayed in the Access Rights window.
