

---

## Can standard text be added as a template for email?

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

We would like to add the following text to aleph emails:

Check your library account anytime on the library web page

- <http://iis.bhsu.edu/LIS/>
- Click on "Your Account"

Fines may be paid at the Circulation Desk or over the phone with a debit or credit card. Thank you

### Resolution:

General text is inserted into a .xsl form as a "generic-line" template. Thus, you might do:

```
<xsl:call-template name="generic-line">
<xsl:with-param name="line" select="###Check your library account anytime on the library web page
## •http://iis.bhsu.edu/LIS/
## •Click on Your Account
####Fines may be paid at the Circulation Desk or over the phone with a debit or credit card. Thank you."
</xsl:call-template>
```
