

Basic steps in Publishing (for Primo)

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Description:

We want to create a tar file for use with Primo from our abc01 bib records. What are the basic steps for this?

Resolution:

You will need to:

Make sure that the abc01 tab_publish has a line for the PRIMO-FULL dataset with "MARC_XML" in column 5

Make sure that the abc01 tab_expand has a line for the expand specified in column 4 of tab_publish

Run p_publish_04 (in abc01) (to create the z00p) and then

Run p_publish_06 to read the z00p and create the tar files.

Start ue_21 in abc01 (for ongoing updating of z00p).

The z00p resides in the \$usr_library.

You should do the initial run of p_publish_06 (in abc01) with:

"Range of Documents": 000000000 to 999999999,

Input File Name ... blank, and

Update Date Flag = Yes.

See KB 16384-9185 and "The Aleph Publishing Mechanism.pdf" on the Doc Portal for additional information.
