
p_print_04 sort options

- **Article Type:** General

Description:

In print-04 there are sort options. (See attached.)

But where are these defined? Where, for example, do we define what field "Location then Author" will sort?

Resolution:

The sorts in p_print_04 need to correspond to tab_sort, in a fashion similar to column 4 of www_tab_short.eng. I have included the v20 usm01 tab_sort below.

We see that sort 07 was Location, but it's now commented out and 07 is now "Photo" and 06 is now Location. (The others are still OK.)

It would seem that the p-print-04.xml should be corrected, but since I don't think it's used much, I'd say it's not worth it.
