## Preventive Maintenance and Recovery Policy section 2.2: util A.

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 19.01
- 

### Description:

The System Administrator's Guide-Preventative Maintenance and Recovery Policy, section 2.2, says:

The ALEPH application creates and uses Oracle tables for temporary data. These tables need to be cleaned periodically by using UTIL A. Note that there may be tables you wish to use so pay special notice before dropping them. For example, some sites extract statistics from the Z34 table. You can perform a sequential dump of the Z34 and preserve this file before dropping it.

Is this correct?

### Resolution:

See attached Word document.
