## Is tab03 necessary in ALEPH 16.02?

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

On our test server, using util f/1/13 to index a record, I got the followings errors:

Load: /aleph/aleph/u16\_1/utf\_files/aleph/aleph/u16\_1/cun01/tab/tab03

Error: Load: /aleph/aleph/u16\_1/utf\_files/aleph/aleph/u16\_1/cun01/tab/tab03

Is tab03 necessary? It doesn't exist in the ./usm01/tab/ .

### Resolution:

tab03 defines words to drop from search query and indexing.

In version 16.02 tab03 is used in two situations:

1. In z39.50 searching (which looks for the table in the ./ext01/tab/ directory); and
2. For indexing purposes, for the expand\_doc\_acronym\_title (which looks for it in the ./xxxnn/tab/ directory). In this case, you should copy tab03 from the ext01 \$data\_tab directory to the \$data\_tab directory of the bib library.

Note: tab03 is in the /exlibris/aleph/a16\_1/aleph/headers/libnn/tab/ directory.
