

## p\_manage\_01 stops ue\_01 process

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

I started p\_manage\_01 on our test server (to correct a Word indexing problem) and find that the ue\_01 indexing daemon has stopped and the queue of z07's (as seen in

```
SQL-ABC01> select count(*) from z07;
```

is at 177,000 and is not going down.

### Resolution:

As noted in the "How To Run Index Jobs" document, p\_manage\_01 stops all of the ue indexing daemons in the library it is being run in.

Once p\_manage\_01 is done, it will restart ue\_01 and the other daemons and you should start seeing the z07 count going down again.
