- 

### Description:

Is there a way to prevent a user with fines from placing hold requests?

### Resolution:

Though the tab\_check\_circ has checks for fines, the ./xxx50/tab\_hold\_request, which restricts the placing of hold requests, has no such checks.

For an individual user, you could set the z305 (Local Patron Information) hold-permission to "N". You might use SQL to do this for all users with fines; and then parallel SQL to set the permission back to "Y" if there are no fines.

fine, request
