

Section Break Problems in User Interface

- **Article Type:** General
 - **Product:** MetaLib
 - **Product Version:** 4
-

Description:

We're having a problem on some pages with section breaks. The pages we know of this happening on are the E-Shelf and MetaSearch pages.

The page break problems occur around the Action Icon sections.

The pages display fine in Internet Explorer (IE), but not in Firefox and Chrome.

Resolution:

There are known problems with Firefox and DIVs. Liberal use of the "overflow:auto;" CSS declaration in problem DIVs may help.

However, we cannot support non-standard CSS and HTML. If you display a page using the default MetaLib code and the problem does not occur, then the change is not supported.
