## Copyright cleared requests to the British Library

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

How can we configure Copyright cleared requests to the British Library?

### Resolution:

First of all, you should have rep\_change #001382 in v.18, or a higher version of Aleph.

Description: In the new Integrated ILL module, a new place holder (for the British Library) has been added in order to display the "Additional Request to supplier number" with the keywords.

### Implementation notes:

When the TX line includes the Additional Request to Supplier number instead of the Request number, use place holder \$01538 instead of \$00138.

See KB 16384-10305 for the full implementation notes of the Additional Request to Supplier number functionality.

ABC40/form\_eng/\*bldsc\* templates should have the following:

TX\$01538

On our internal test server the request number appears correctly (our prefix is EXL-):

TXRZEXL-2509
