
Table/Index Znn is not managed by xxxnn

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

You get this message in UTIL A/17/1, UTIL A/17/12, etc.: Table/Index Znn is not managed by xxxnn (where Znn is ALEPH Oracle table and xxxnn is ALEPH library).

Resolution:

Check the `./xxxnn/file_list`. If this table is included, then you shouldn't get this message.

Is the "xxxnn" in lowercase, such as "exu01" or "usm50"? This indicates that the `setenv active_library set_symbol ACTIVE_LIBRARY` lines in the `./xxxnn/prof_library` have the library value in lowercase. It must be in *upper*case. That is, it must be: `setenv active_library EXU01 not: setenv active_library exu01` And: `set_symbol ACTIVE_LIBRARY EXU01 not: set_symbol ACTIVE_LIBRARY exu01`
