## Oracle instance terminated.... not connected to Oracle

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 16.02
- 

### Description:

You see these errors in the log of a job or daemon: Oracle error: update\_cursor ... ORA-01092: ORACLE instance terminated. Disconnection forced ... ORA-03114: not connected to ORACLE

### Resolution:

It's possible that the job somehow caused Oracle to shut down, but it's more likely that some other process/person shut Oracle down and this error is the \*result\* of that shutdown.

Try rerunning the job.

If the same error occurs at the same place in the job or with the same record (for a daemon), contact Ex Libris Support.
