Description:

We are trying to set up SDI, working on our test server. On the SDI request screen, I would like to remove the choices of Sublibrary and Base, since we have only one sublibrary and only one public base. But these are Mandatory fields and if I comment them out in the html, the form won't submit. Is there a way I can pre-select the values, and have the choices not display on the webpage?

Resolution:

You can define hidden field for SDI sub library and base list in bor-sdi-update like this:

```
<input type=hidden name="sdi_sub_library" value="yourlibraryname">  
<input type=hidden name="base_list" value="yourbasename">
```

Comment out all the original lines for SDI sub library and base list. Then restart web server.
